

Technical data and general information on the "Leopard 2 gearbox"

[MOZ-BW00-0180]

The gearboxes have been greased, although they can be greased later depending on how the gearbox is used. The motors and gearboxes were checked for functionality before delivery, and the motors are also appropriately suppressed, so you can connect them to your control module without any problems (note the technical data!).

Although the gearboxes are robustly built, it is still recommended to handle the model/gearbox with care to avoid damage! There is a 2-year guarantee on the electronic components; this period begins upon receipt of the model/gearbox.

Technical data of the engines (each):

Operating voltage	6,6 – 8,4 V/DC
nominal voltage	7,2 V/DC
Max. Torque	30 mNm
No-load current	2,6 A
Current at max. effect	10,0 A
Pmax	10,0 A

(The information comes directly from the manufacturer and I assume no liability for it)

Warning:

" Not suitable for children under 36 months."

The quick way to the shop, scan and there you go...
